windows to
meet today's
architectural
challenges

About Winco . . .

As one of the pioneers in the architectural window business, Winco has been manufacturing top performance windows for schools, institutions and commercial buildings for **more than 75 years**. We have the experience to meet the unique requirements of schools because Winco **specializes** in the aesthetically challenging historical renovations, architecturally exacting new school designs, fast turnaround, high performance and large order size projects required for dormitories. Today, most of the work we produce is for schools.

Of course, we know how to work with architects and contractors, but Winco also understands the needs of students, administrators, facility managers and school boards. We've worked with criteria unique to **school construction deadlines**, when vacation periods, nights, holidays and off hours are the only times when buildings are accessible. Specify Winco when windows are needed that not only look great, but also have features like safety, durability, ease of operation, vandal resistance, noise reduction and hurricane ratings.

We are **proud** that Winco is a charter member of the American Architectural Manufacturers Association (AAMA), and that our products are tested to meet or exceed their approved **specifications** for Heavy Commercial (HC) and Architectural Window (AW) tests. Winco also has products that meet Dade County hurricane standards.

Our networked computer system tracks and communicates job progression from bid, to contract, to shop data, detailing, fabrications, production and to job site delivery. In fact, the progress of each individual job can be accessed on the Internet. We can easily provide **technical support** both on-site or through our home office. Winco's complete line of windows, including detailed specifications, is available on CD-ROM and the Internet at www.wincowindow.com

Vertically integrated production at Winco includes in-house glass processing, anodizing or your choice of high performance Kynar paint in a wide range of colors.

Looking to the future, Winco conducts on-going **research** in conjunction with the educational community to develop better features and designs to meet today and tomorrow's technical challenges.

If you are looking for a window company that really understands the school environment, that can deliver windows on your time schedule, meets your budget, that isn't afraid to take a **custom** approach to find the solution that is right for you then . . .

Winco is clearly the choice for your projects.
