Clearly the choice for windows

## VERSATILE WINDOW SYSTEM

Winco is at it again. Introducing a window that will meet all of your project needs, the new “Versatile Window” is the system you have been waiting for.

With a unique “platform” approach, Winco can create a window system that targets your performance requirements and achieves them by using multi layered glazing configurations.

Are you looking for a superior U- value and SHGC performance, we can add multiple layers of coated glass and warm edge spacer technology. Is STC also a concern we can throw in a third layer of laminated

glass in an interior hinged panel to reduce exterior noise. Maybe your project required translucent glazing in part of the window.

Instead of providing a separate fiberglass reinforced panel system, we can glaze a multiwall polycarbonate material within the same AW rated window system.

Is security an issue, fear not. With the addition of polycarbonates and laminated glass the Versatile Window will meet; vandal, psychiatric, bomb blast, hurricane impact, ballistic and tornado test requirements.

The Versatile Window is available in fixed, projected and casement configurations with a multitude of trims and accessories, including internal venetian blinds for individual control of vision and daylighting.

For more information regarding the versatile window and how it can work for you please contact your local Winco Sales Representative or visit our website [www.wincowindow.com](http://www.wincowindow.com).

**Winco's part of history, here today and making the future**

## VERSATILE WINDOW PLATFORM

### ENERGY EFFICIENCY

Pour in place polyurethane thermal break with Azo-Braiding mechanical locking technology backed by a 10 year warranty.

Full range of IGUs can be coupled with MAKROLON MAK 15 or translucent Multiwall UV, U Values of 0.11 are possible.

Frame Depth from 2" to 4-1/2" to bridge varying wall cavity requirements.

### VENTILATION

Projected, casement, hung and sliding operable vents are available.

Allow for fresh air ventilation when mechanical systems fail.

Can be manufactured to allow emergency egress or limited to prevent unauthorized access.

### SOUND CONTROL

Lowering the outside noise improves the interior environment and improves productivity.

Double and triple glazing can achieve STC up to 52.

Windows can still provide ventilation and security.

### SECURITY

MAK 15 polycarbonate provides "Invisible Security" and warranted for 15 year against breakage and yellowing.

High performance IGU can be protected from breakage and facilities protection from forced entry.

Level 3 ballistic resistance, hurricane and tornado protection, blast resistant and psychiatric applications are all possible with the use of MAK 15 Polycarbonate and or Makrolon translucent Multi-Wall UV.

### LIGHTING CONTROL

Makrolon translucent Multi-Wall UV provides defused lighting and privacy for the occupants.

Venetian blinds can be added and enclosed between glazing surfaces, providing facilities occupants total lighting control.

Blinds stay clean and safe from damage when enclosed between glazing surfaces.
