

# Storm Clouds Brewing

## Be Ready with Winco's Tornado Rated Windows

WINCO's tornado-rated windows are designed to withstand 250 mph winds with flying debris impact testing for a tornado using a 15-pound 2x4 traveling at 100mph. Since tornadoes happen quickly and with little warning, it's important to have the right windows in place and a plan of action for when storm clouds are brewing.

City of Tavares Public Safety Complex

Location: Tavares, Florida

WINCO offers tornado rated windows that meet the standards for FEMA P-361, the Federal Emergency Management Agency's third edition of Safe Rooms for Tornadoes and Hurricanes, as well as ICC500 – 2014 certification, the third edition of the ICC and National Storm Shelter Association (NSSA) joint project to design facilities for use as emergency shelters.

Pinellas County Building

Location: Clearwater, FL

WINCO's storm rated windows are ideal for schools, safe rooms, and 911 centers that are used as storm shelters. When the power goes out during a storm, the natural light afforded by protective windows can be critical. And, unlike rolling storm shutters, WINCO's FEMA windows are always in protection mode.

**When it comes to severe storm performance, make sure your windows meet all your occupants needs year-round**

- **AAMA Gold Level Certification– Water and air tested to over Aw-80 and 250mph**
- **Designed for high thermal efficiency**
- **Meets FEMA P-361, ICC-500, and ASTM 1886/E1996 Levels D & E requirements for safe rooms and community shelters**
- **Florida Product Approval#24436 for Hurricane and Tornado Usage**
